

National Study of Adrenal Tumour

If you have a confirmed diagnosis of pheochromocytoma or paraganglioma or adrenocortical tumour you may be eligible to participate in a study to help health care professionals better understand your condition.

Using the power of data we are hoping to collect clinical and patient reported information from hospitals and patients themselves through an app to improve the care received.

If you are interested please ask your clinician at your hospital where you have appointments for this condition to be a part of the study.
